#### Javascript Course: Chapter 4 Lab Exercises

- 1) Create an HTML document with the basic document structure as demonstrated in the Chapter 1 lecture. In the document body add script tags with the appropriate attributes to add Javascript code.
- 2) Using the correct dialog box code, create a box that contains the text "What is your dog's age in human years?" The user should be able to type their response directly in to the dialog box.
- 3) Store the user's response in a variable called `dogAgeInHumanYears`.
- 4) Multiply the `dogAgeInHumanYears` value by 7 and store in a variable called `dogAgeInDogYears`.
- 5) Use an `alert()` box to output the result with the text "Your dog is X years old in dog years."
- 6) After the user acknowledges the `alert()` box another dialog should appear and ask the user "Shall I exit the program?" This dialog should display two buttons allowing the user to confirm or cancel.
- 7) If the user confirms the text "Exiting Dog Years Calculator" should appear, if the user cancels the text "Cancelling Exit" shall appear.

Correct Browser Output:
