**HTML and CSS (with HTML 5)!**

Chapter 2 Lab Exercises

1) Create a correct and standard-compliant XHTML basic document structure. Inside the <title> element place the text Lab 2: Text.

2) Within the body element create two <div> elements (opening and closing tags). Within the first element put an appropriate header element that contains the text content "Places I'd like to visit." In the second <div> element place an appropriate header element that contains the text content "Foods I like to Eat."

3) Under each of the header elements create a list of places you'd like to visit and places you like to eat using <p> tags, <br/> tags and other markup tags as appropriate.

4) Create a <style> element as was demonstrated in the video lecture. Make sure to use the appropriate attribute/value pair with your <style> tag to insure that browsers recognize your stylesheet correctly.

5) Style your heading tags as follows:

   Font:           Georgia
   Font Size:      16pt
   Color:          Red 215 | Green 0 | Blue 0

6) Style the text in the lists below the heading tags as follows:

   Font:           Arial
   Font Size:      80% of the default style sheet (Use ems)
   Color:          #0000AB

7) Using the correct CSS rule center align your heading tags and make them all capital letters (using CSS—Don't change the text content of the elements.)
