PHP For Beginners
Lab Exercise 2

1. Insure that your MAMP or WAMP server stack is downloaded, installed and running. You can download WAMP server for Windows at www.wampserver.com/en/. You can download MAMP server for Mac at www.mamp.info.
2. Set up an HTML document and embed an opening and closing PHP tag in the <body> section of the document. Save that document in your www folder (Windows) or htdocs folder (Macintosh) as described in the video lecture.
3. Declare the following variables:
      Operand1 with a value of 15.55
      Operand2 with a value of 2.94
4. Output the results of adding, subtracting, multiplying, dividing and modding the two variables. You should produce 5 lines of output as modeled below:
      15.55 + 2.94 = 18.49
      15.55 - 2.94 = 12.61
   If, in your code, the value of Operand1 or Operand2 is changed, you should not have change any othe part of your code to display a correct result.
5. Place the following sentence in to a variable called phrase: "If you are strong enough, there are no precedents."
6. Output the phrase to the browser.
7. Add the following to the phrase variable through concatenation: " -Unknown"
8. Output the phrase to the browser again.

Remember:
- Register as a LearnToProgram.tv student at www.learntoprogran.tv/register. This will provide you access to numerous resources as well as discounts on future classes.
- Help is available! Utilize the forms that are available to you as well as the instructor. Lab exercises are checked upon request
